

**The Future Problem Solving Program Malaysia (FPSPM)  
Presents : A 2 day Workshop**

***Thinking Skills for the 21st Century: The Future Problem Solving Program Approach***

These workshops are designed to work with teachers/parents in creating a more proactive approach to teaching and learning to optimize their children's strengths for the overall development of these young individuals. This workshop aims to introduce strategies to facilitate students "how to think, not what to think" for a better and more positive future. In order to develop a dynamic learning environment with the rapid changes in the present social, economic, political and technological landscape around the world, an educational organization needs to have leaders in critical and creative thinking. An educational organization that is able to have an insight into the possible future will give them the potential to lead rather than follow a trend.

Fundamentally FPSP promotes steps that will enhance the way, we, in schools, institutions of higher learning think and deal with challenges and solutions on the whole. There is an urgent and dire need to put thinking skills in place at schools, colleges and workplaces to create a dynamic population that is competitive both locally and globally. This is very crucial in the sustainable development of human potential.

**FPSP** helps bring out the energy of young people in a way that you would love to see happen in every classroom and situation through multi-disciplinary educational and learning activities (Renzulli).

"It is essential that we raise our sights beyond standardized achievement tests and engage in rigorous inquiry employing more complex and appropriate assessments and criteria"

**FPSP** will also develop intangible skills and abilities which include self-confidence, leadership, teamwork collaboration and communication.

***Enroll to become a coach with FPSPM***
